

CLAIM AMENDMENTS

Claim 1 (currently amended): A detachable ~~bracket~~ container for a golf cart having two inclination arms downwardly and outwardly extending, wherein said detachable ~~bracket~~ container comprises:

a ~~bracket~~ container frame having a storing chamber; and

two ~~bracket~~ container holders spacedly mounted on a rear side of said ~~bracket~~ container frame to define a holding length between said ~~bracket~~ container holders, wherein said holding length is larger than an upper span between two upper ends of said inclination arms and is smaller than a lower span between two lower ends of said inclination arms, such that said ~~bracket~~ container holders are adapted for self-adjustably holding along said two inclination arms respectively at a position that said holding length matches with a transverse distance between said two inclination arms so as to substantially hold said detachable ~~bracket~~ container at said golf cart.

Claim 2 (currently amended): The detachable ~~bracket~~ container, as recited in claim 1, wherein each of said ~~bracket~~ container holders has a hooking end extended from said rear side of said ~~bracket~~ container frame for holding at said respective inclination arm, wherein said holding length is defined between said hooking ends of said ~~bracket~~ container holders such that said two ~~bracket~~ container holders are adapted for holding at said two inclination arms from two outer sides thereof once said holding distance between said two ~~bracket~~ container holders matches with said transverse distance between said inclination arms.

Claim 3 (currently amended): The detachable ~~bracket~~ container, as recited in claim 2, wherein each of said ~~bracket~~ container holders further has a detachable end detachable affixed on said rear side of said ~~bracket~~ container frame to selectively adjust said holding length between said two hooking ends of said ~~bracket~~ container holders with respect to said transverse distance between said inclination arms.

Claim 4 (currently amended): The detachable ~~bracket~~ container, as recited in claim 2, further comprising two supplement ~~bracket~~ container holders provided on said rear side of said ~~bracket~~ container frame to define a supplemental holding length between said two supplement ~~bracket~~ container holders for holding along said

inclination arms respectively, wherein said supplemental holding length is larger than said holding length of said ~~bracket~~ container holders and is smaller than said lower span of said inclination arms, such that said supplemental ~~bracket~~ container holders are adapted for self-adjustably holding along said two inclination arms respectively at a position that said supplemental holding length matches with said transverse distance between said two inclination arms.

Claim 5 (currently amended): The detachable ~~bracket~~ container, as recited in claim 3, further comprising two supplement ~~bracket~~ container holders provided on said rear side of said ~~bracket~~ container frame to define a supplemental holding length between said two supplement ~~bracket~~ container holders for holding along said inclination arms respectively, wherein said supplemental holding length is larger than said holding length of said ~~bracket~~ container holders and is smaller than said lower span of said inclination arms, such that said supplemental ~~bracket~~ container holders are adapted for self-adjustably holding along said two inclination arms respectively at a position that said supplemental holding length matches with said transverse distance between said two inclination arms.

Claim 6 (currently amended): The detachable ~~bracket~~ container, as recited in claim 1, wherein each of said ~~bracket~~ container holders comprises a holding member, having a U-shaped cross section, provided on said rear side of said ~~bracket~~ container frame, wherein each of said holding members has a holding groove and a side opening for receiving said respective inclination arm within said holding groove, such that said two holding members of said ~~bracket~~ container holders are adapted for holding at said two inclination arms from two outer sides thereof.

Claim 7 (currently amended): The detachable ~~bracket~~ container, as recited in claim 6, wherein each of said holding grooves is downwardly and outwardly extended for matching an inclination angle of said respective inclination arm such that when said holding members are slid along said inclination arms respectively, said holding members are adapted for fittingly holding along said inclination arms in said holding grooves respectively so as to securely hold said ~~bracket~~ container frame on said golf cart.

Claim 8 (currently amended): The detachable ~~bracket~~ container, as recited in claim 6, further comprising a length adjusting unit which comprises two shaft holders spacedly mounted on said rear side of said ~~bracket~~ container frame and a control shaft

rotatably mounted to said shaft holder to longitudinally supported on said rear side of said ~~bracket~~ container frame, wherein said control shaft has two threaded end portions rotatably mounted to said ~~bracket~~ container holders respectively, such that when said control shaft is rotated, said two ~~bracket~~ container holders are driven to slide along said threaded end portions of said control shaft so as to selectively adjust said holding distance between ~~the bracket~~ said container holders.

Claim 9 (currently amended): The detachable ~~bracket~~ container, as recited in claim 7, further comprising a length adjusting unit which comprises two shaft holders spacedly mounted on said rear side of said ~~bracket~~ container frame and a control shaft rotatably mounted to said shaft holder to longitudinally supported on said rear side of said ~~bracket~~ container frame, wherein said control shaft has two threaded end portions rotatably mounted to said ~~bracket~~ container holders respectively, such that when said control shaft is rotated, said two ~~bracket~~ container holders are driven to slide along said threaded end portions of said control shaft so as to selectively adjust said holding distance between the ~~bracket~~ container holders.

Claim 10 (currently amended): The detachable ~~bracket~~ container, as recited in claim 8, further comprising a retention holder unit which comprises a resilient arm substantially mounted at said shaft holders to downwardly suspend two resilient end portions and two retention holders mounted at said resilient end portions of said resilient arm respectively, wherein said resilient end portions of said resilient arm are adapted for providing two outward pushing forces against said inclination arms when said retention holders are held at inner sides of said inclination arms respectively so as to securely hold said ~~bracket~~ container frame on said golf cart.

Claim 11 (currently amended): The detachable ~~bracket~~ container, as recited in claim 9, further comprising a retention holder unit which comprises a resilient arm substantially mounted at said shaft holders to downwardly suspend two resilient end portions and two retention holders mounted at said resilient end portions of said resilient arm respectively, wherein said resilient end portions of said resilient arm are adapted for providing two outward pushing forces against said inclination arms when said retention holders are held at inner sides of said inclination arms respectively so as to securely hold said ~~bracket~~ container frame on said golf cart.

Claim 12 (currently amended): The detachable ~~bracket~~ container, as recited in claim 10, wherein said two retention holders spacedly supported on said rear side of said ~~bracket~~ container frame via said resilient arm to define a supplemental holding length between said retention holders, wherein said supplemental holding length is larger than said holding length of said ~~bracket~~ container holders and is larger than said transverse distance of said inclination arms, such that said resilient arm provides said outward pushing force at said retention holders for substantially biasing against said two inclination arms respectively when said supplemental holding length matches with said transverse distance between said two inclination arms.

Claim 13 (currently amended): The detachable ~~bracket~~ container, as recited in claim 11, wherein said two retention holders spacedly supported on said rear side of said ~~bracket~~ container frame via said resilient arm to define a supplemental holding length between said retention holders, wherein said supplemental holding length is larger than said holding length of said ~~bracket~~ container holders and is larger than said transverse distance of said inclination arms, such that said resilient arm provides said outward pushing force at said retention holders for substantially biasing against said two inclination arms respectively when said supplemental holding length matches with said transverse distance between said two inclination arms.

Claim 14 (currently amended): The detachable ~~bracket~~ container, as recited in claim 6, further comprising two supplement ~~bracket~~ container holders provided on said rear side of said ~~bracket~~ container frame to define a supplemental holding length between said two supplement ~~bracket~~ container holders for holding along said inclination arms respectively, wherein said supplemental holding length is larger than said holding length of said ~~bracket~~ container holders and is smaller than said lower span of said inclination arms, such that said supplemental ~~bracket~~ container holders are adapted for self-adjustably holding along said two inclination arms respectively at a position that said supplemental holding length matches with said transverse distance between said two inclination arms.

Claim 15 (currently amended): The detachable ~~bracket~~ container, as recited in claim 7, further comprising two supplement ~~bracket~~ container holders provided on said rear side of said ~~bracket~~ container frame to define a supplemental holding length between said two supplement ~~bracket~~ container holders for holding along said inclination arms respectively, wherein said supplemental holding length is larger than

said holding length of said ~~bracket~~ container holders and is smaller than said lower span of said inclination arms, such that said supplemental ~~bracket~~ container holders are adapted for self-adjustably holding along said two inclination arms respectively at a position that said supplemental holding length matches with said transverse distance between said two inclination arms.

Claim 16 (currently amended): The detachable ~~bracket~~ container, as recited in claim 6, further comprising a length adjusting unit which comprises two retention bases, each having a longitudinal slot, spacedly mounted on said rear side of said ~~bracket~~ container frame and two fastening units securely mounted said ~~bracket~~ container holders to said retention bases to adjustably slide said ~~bracket~~ container holders along said longitudinal slots respectively, so as to selectively adjust said holding length between said ~~bracket~~ container holders.

Claim 17 (currently amended): The detachable ~~bracket~~ container, as recited in claim 7, further comprising a length adjusting unit which comprises two retention bases, each having a longitudinal slot, spacedly mounted on said rear side of said ~~bracket~~ container frame and two fastening units securely mounted said ~~bracket~~ container holders to said retention bases to adjustably slide said ~~bracket~~ container holders along said longitudinal slots respectively, so as to selectively adjust said holding length between said ~~bracket~~ container holders.

Claim 18 (currently amended): The detachable ~~bracket~~ container, as recited in claim 16, wherein each of said fastening units comprises a slider shaft frontwardly extended from said holding member of said respective ~~bracket~~ container holder to slidably pass through said longitudinal slot of said respective retention base and a shaft fastener detachably fastened with said slider shaft to securely lock up said ~~bracket~~ container holder at said respective retention base so as to retain said ~~bracket~~ container holder on said ~~bracket~~ container frame in position.

Claim 19 (currently amended): The detachable ~~bracket~~ container, as recited in claim 17, wherein each of said fastening units comprises a slider shaft frontwardly extended from said holding member of said respective ~~bracket~~ container holder to slidably pass through said longitudinal slot of said respective retention base and a shaft fastener detachably fastened with said slider shaft to securely lock up said ~~bracket~~ container

container holder at said respective retention base so as to retain said ~~bracket~~ container holder on said ~~bracket~~ container frame in position.

Claim 20 (currently amended): A detachably foldable ~~bracket~~ container for a golf cart having two inclination arms downwardly and outwardly extending, wherein said detachably foldable ~~bracket~~ container comprises:

a ~~bracket~~ container frame comprises a plurality of boundary walls pivotally connected with each other edges to edges, a base wall pivotally connected to one of said boundary walls edge to edge, and at least a retention stopper provided at a bottom edge of said corresponding boundary wall in such a manner that when said base wall is pivotally and downwardly folded within said boundary walls and is stopped by said retention stopper, a storing chamber having a top opening is substantially formed within said boundary walls and said base wall; and

two ~~bracket~~ container holders spacedly mounted on a rear side of said ~~bracket~~ container frame to define a holding length between said ~~bracket~~ container holders, wherein said holding length is larger than an upper span between two upper ends of said inclination arms and is smaller than a lower span between two lower ends of said inclination arms, such that said ~~bracket~~ container holders are adapted for self-adjustably holding along said two inclination arms respectively at a position that said holding length matches with a transverse distance between said two inclination arms so as to substantially hold said detachable ~~bracket~~ container at said golf cart.

Claim 21 (currently amended): The detachably foldable ~~bracket~~ container, as recited in claim 20, wherein said boundary walls are inclinedly extended from said base wall such that said top opening of said boundary frame is facing in an inclination manner when said ~~bracket~~ container frame is held on said golf cart.

Claim 22 (currently amended): The detachably foldable ~~bracket~~ container, as recited in claim 20, further comprising two supplement ~~bracket~~ container holders provided on said rear side of said ~~bracket~~ container frame to define a supplemental holding length between said two supplement ~~bracket~~ container holders for holding along said inclination arms respectively, wherein said supplemental holding length is larger than said holding length of said ~~bracket~~ container holders and is smaller than said lower span of said inclination arms, such that said supplemental ~~bracket~~ container holders are

adapted for self-adjustably holding along said two inclination arms respectively at a position that said supplemental holding length matches with said transverse distance between said two inclination arms.

Claim 23 (currently amended): The detachably foldable ~~bracket~~ container, as recited in claim 21, further comprising two supplement ~~bracket~~ container holders provided on said rear side of said ~~bracket~~ container frame to define a supplemental holding length between said two supplement ~~bracket~~ container holders for holding along said inclination arms respectively, wherein said supplemental holding length is larger than said holding length of said ~~bracket~~ container holders and is smaller than said lower span of said inclination arms, such that said supplemental ~~bracket~~ container holders are adapted for self-adjustably holding along said two inclination arms respectively at a position that said supplemental holding length matches with said transverse distance between said two inclination arms.

Claim 24 (currently amended): The detachably foldable ~~bracket~~ container, as recited in claim 20, further comprising a length adjusting unit which comprises two shaft holders spacedly mounted on said rear side of said ~~bracket~~ container frame and a control shaft rotatably mounted to said shaft holder to longitudinally supported on said rear side of said ~~bracket~~ container frame, wherein said control shaft has two threaded end portions rotatably mounted to said ~~bracket~~ container holders respectively, such that when said control shaft is rotated, said two ~~bracket~~ container holders are driven to slide along said threaded end portions of said control shaft so as to selectively adjust said holding distance between the ~~bracket~~ container holders.

Claim 25 (currently amended): The detachably foldable ~~bracket~~ container, as recited in claim 21, further comprising a length adjusting unit which comprises two shaft holders spacedly mounted on said rear side of said ~~bracket~~ container frame and a control shaft rotatably mounted to said shaft holder to longitudinally supported on said rear side of said ~~bracket~~ container frame, wherein said control shaft has two threaded end portions rotatably mounted to said ~~bracket~~ container holders respectively, such that when said control shaft is rotated, said two ~~bracket~~ container holders are driven to slide along said threaded end portions of said control shaft so as to selectively adjust said holding distance between the ~~bracket~~ container holders.

Claim 26 (currently amended): The detachably foldable ~~bracket~~ container, as recited in claim 24, further comprising a retention holder unit which comprises a resilient arm substantially mounted at said shaft holders to downwardly suspend two resilient end portions and two retention holders mounted at said resilient end portions of said resilient arm respectively, wherein said resilient end portions of said resilient arm are adapted for providing two outward pushing forces against said inclination arms when said retention holders are held at inner sides of said inclination arms respectively so as to securely hold said ~~bracket~~ container frame on said golf cart.

Claim 27 (currently amended): The detachably foldable ~~bracket~~ container, as recited in claim 25, further comprising a retention holder unit which comprises a resilient arm substantially mounted at said shaft holders to downwardly suspend two resilient end portions and two retention holders mounted at said resilient end portions of said resilient arm respectively, wherein said resilient end portions of said resilient arm are adapted for providing two outward pushing forces against said inclination arms when said retention holders are held at inner sides of said inclination arms respectively so as to securely hold said ~~bracket~~ container frame on said golf cart.

Claim 28 (currently amended): The detachably foldable ~~bracket~~ container, as recited in claim 26, wherein said two retention holders spacedly supported on said rear side of said ~~bracket~~ container frame via said resilient arm to define a supplemental holding length between said retention holders, wherein said supplemental holding length is larger than said holding length of said ~~bracket~~ container holders and is larger than said transverse distance of said inclination arms, such that said resilient arm provides said outward pushing force at said retention holders for substantially biasing against said two inclination arms respectively when said supplemental holding length matches with said transverse distance between said two inclination arms.

Claim 29 (currently amended): The detachably foldable ~~bracket~~ container, as recited in claim 27, wherein said two retention holders spacedly supported on said rear side of said ~~bracket~~ container frame via said resilient arm to define a supplemental holding length between said retention holders, wherein said supplemental holding length is larger than said holding length of said ~~bracket~~ container holders and is larger than said transverse distance of said inclination arms, such that said resilient arm provides said outward pushing force at said retention holders for substantially biasing against

said two inclination arms respectively when said supplemental holding length matches with said transverse distance between said two inclination arms.

Claim 30 (currently amended): The detachably foldable ~~bracket~~ container, as recited in claim 20, wherein each of said ~~bracket~~ container holders comprises a holding member, having a U-shaped cross section, provided on said rear side of said ~~bracket~~ container frame, wherein each of said holding members has a holding groove and a side opening for receiving said respective inclination arm within said holding groove, such that said two holding members of said ~~bracket~~ container holders are adapted for holding at said two inclination arms from two outer sides thereof.

Claim 31 (currently amended): The detachably foldable ~~bracket~~ container, as recited in claim 23, wherein each of said ~~bracket~~ container holders comprises a holding member, having a U-shaped cross section, provided on said rear side of said ~~bracket~~ container frame, wherein each of said holding members has a holding groove and a side opening for receiving said respective inclination arm within said holding groove, such that said two holding members of said ~~bracket~~ container holders are adapted for holding at said two inclination arms from two outer sides thereof.

Claim 32 (currently amended): The detachably foldable ~~bracket~~ container, as recited in claim 29, wherein each of said ~~bracket~~ container holders comprises a holding member, having a U-shaped cross section, provided on said rear side of said ~~bracket~~ container frame, wherein each of said holding members has a holding groove and a side opening for receiving said respective inclination arm within said holding groove, such that said two holding members of said ~~bracket~~ container holders are adapted for holding at said two inclination arms from two outer sides thereof.

Claim 33 (currently amended): The detachably foldable ~~bracket~~ container, as recited in claim 20, wherein each of said ~~bracket~~ container holders has a hooking end extended from said rear side of said ~~bracket~~ container frame for holding at said respective inclination arm, wherein said holding length is defined between said hooking ends of said ~~bracket~~ container holders such that said two ~~bracket~~ container holders are adapted for holding at said two inclination arms from two outer sides thereof once said holding distance between said two ~~bracket~~ container holders matches with said transverse distance between said inclination arms.

Claim 34 (currently amended): The detachably foldable ~~bracket~~ container, as recited in claim 23, wherein each of said ~~bracket~~ container holders has a hooking end extended from said rear side of said ~~bracket~~ container frame for holding at said respective inclination arm, wherein said holding length is defined between said hooking ends of said ~~bracket~~ container holders such that said two ~~bracket~~ container holders are adapted for holding at said two inclination arms from two outer sides thereof once said holding distance between said two ~~bracket~~ container holders matches with said transverse distance between said inclination arms.

Claim 35 (currently amended): A foldable golf cart, comprising:

a supporting frame comprising an upper handle frame and a lower supporting stand pivotally connected to said upper handle frame;

two wheel assemblies each comprising a side wheel and a wheel arm pivotally extended from said supporting frame to rotatably connect with said side wheel;

two inclination arms outwardly downwardly extended from said handle frame to said wheel arms respectively in such a manner that when said handle frame is downwardly folded to overlap with said supporting stand, said two wheel arms are driven to fold inwardly to reduce a distance between said two side wheels so as to fold up said golf cart; and

a detachable ~~bracket~~ container comprising a ~~bracket~~ container frame having a storing chamber, and two ~~bracket~~ container holders spacedly mounted on a rear side of said ~~bracket~~ container frame to define a holding length between said ~~bracket~~ container holders, wherein said holding length is larger than an upper span between two upper ends of said inclination arms and is smaller than a lower span between two lower ends of said inclination arms, such that said ~~bracket~~ container holders are self-adjustably held along said two inclination arms respectively at a position that said holding length matches with a transverse distance between said two inclination arms so as to substantially hold said detachable ~~bracket~~ container at said golf cart.

Claim 36 (currently amended): The foldable golf cart, as recited in claim 35, wherein said detachable ~~bracket~~ container further comprises a length adjusting unit which comprises two shaft holders spacedly mounted on said rear side of said ~~bracket~~

container frame and a control shaft rotatably mounted to said shaft holder to longitudinally supported on said rear side of said ~~bracket~~ container frame, wherein said control shaft has two threaded end portions rotatably mounted to said ~~bracket~~ container holders respectively, such that when said control shaft is rotated, said two ~~bracket~~ container holders are driven to slide along said threaded end portions of said control shaft so as to selectively adjust said holding distance between ~~the bracket~~ said container holders.

Claim 37 (currently amended): The foldable golf cart, as recited in claim 35, wherein said detachable ~~bracket~~ container further comprises a retention holder unit which comprises a resilient arm substantially mounted at said shaft holders to downwardly suspend two resilient end portions and two retention holders mounted at said resilient end portions of said resilient arm respectively, wherein said resilient end portions of said resilient arm are adapted for providing two outward pushing forces against said inclination arms when said retention holders are held at inner sides of said inclination arms respectively so as to securely hold said ~~bracket~~ container frame on said golf cart.

Claim 38 (currently amended): The foldable golf cart, as recited in claim 35, wherein each of said ~~bracket~~ container holders comprises a holding member, having a U-shaped cross section, provided on said rear side of said ~~bracket~~ container frame, wherein each of said holding members has a holding groove and a side opening to receive said respective inclination arm within said holding groove, such that said two holding members of said ~~bracket~~ container holders are held at said two inclination arms from two outer sides thereof.

Claim 39 (currently amended): The foldable golf cart, as recited in claim 37, wherein each of said ~~bracket~~ container holders comprises a holding member, having a U-shaped cross section, provided on said rear side of said ~~bracket~~ container frame, wherein each of said holding members has a holding groove and a side opening to receive said respective inclination arm within said holding groove, such that said two holding members of said ~~bracket~~ container holders are held at said two inclination arms from two outer sides thereof.

Claim 40 (currently amended): The foldable golf cart, as recited in claim 35, wherein each of said ~~bracket~~ container holders has a hooking end extended from said

rear side of said ~~bracket~~ container frame to hold at said respective inclination arm, wherein said holding length is defined between said hooking ends of said ~~bracket~~ container holders such that said two ~~bracket~~ container holders are held at said two inclination arms from two outer sides thereof once said holding distance between said two ~~bracket~~ container holders matches with said transverse distance between said inclination arms.

Claim 41 (currently amended): The foldable golf cart, as recited in claim 38, wherein said detachable ~~bracket~~ container further comprises two supplement ~~bracket~~ container holders provided on said rear side of said ~~bracket~~ container frame to define a supplemental holding length between said two supplement ~~bracket~~ container holders to hold along said inclination arms respectively, wherein said supplemental holding length is larger than said holding length of said ~~bracket~~ container holders and is smaller than said lower span of said inclination arms, such that said supplemental ~~bracket~~ container holders are self-adjustably held along said two inclination arms respectively at a position that said supplemental holding length matches with said transverse distance between said two inclination arms.

Claim 42 (currently amended): The foldable golf cart, as recited in claim 40, wherein said detachable ~~bracket~~ container further comprises two supplement ~~bracket~~ container holders provided on said rear side of said ~~bracket~~ container frame to define a supplemental holding length between said two supplement ~~bracket~~ container holders to hold along said inclination arms respectively, wherein said supplemental holding length is larger than said holding length of said ~~bracket~~ container holders and is smaller than said lower span of said inclination arms, such that said supplemental ~~bracket~~ container holders are self-adjustably held along said two inclination arms respectively at a position that said supplemental holding length matches with said transverse distance between said two inclination arms.

Claim 43 (currently amended): The foldable golf cart, as recited in claim 37, wherein said ~~bracket~~ container frame comprises a plurality of boundary walls pivotally connected with each other edges to edges, a base wall pivotally connected to one of said boundary walls edge to edge, and at least a retention stopper provided at a bottom edge of said corresponding boundary wall in such a manner that when said base wall is pivotally and downwardly folded within said boundary walls and is stopped by said

retention stopper, a storing chamber having a top opening is substantially formed within said boundary walls and said base wall.

Claim 44 (currently amended): The foldable golf cart, as recited in claim 41, wherein said ~~bracket~~ container frame comprises a plurality of boundary walls pivotally connected with each other edges to edges, a base wall pivotally connected to one of said boundary walls edge to edge, and at least a retention stopper provided at a bottom edge of said corresponding boundary wall in such a manner that when said base wall is pivotally and downwardly folded within said boundary walls and is stopped by said retention stopper, a storing chamber having a top opening is substantially formed within said boundary walls and said base wall.

Claim 45 (currently amended): The foldable golf cart, as recited in claim 42, wherein said ~~bracket~~ container frame comprises a plurality of boundary walls pivotally connected with each other edges to edges, a base wall pivotally connected to one of said boundary walls edge to edge, and at least a retention stopper provided at a bottom edge of said corresponding boundary wall in such a manner that when said base wall is pivotally and downwardly folded within said boundary walls and is stopped by said retention stopper, a storing chamber having a top opening is substantially formed within said boundary walls and said base wall.

Claim 46 (currently amended): The foldable golf cart, as recited in claim 43, wherein said boundary walls are inclinedly extended from said base wall such that said top opening of said boundary frame is facing in an inclination manner when said ~~bracket~~ container frame is held on said golf cart.

Claim 47 (currently amended): The foldable golf cart, as recited in claim 44, wherein said boundary walls are inclinedly extended from said base wall such that said top opening of said boundary frame is facing in an inclination manner when said ~~bracket~~ container frame is held on said golf cart.

Claim 48 (currently amended): The foldable golf cart, as recited in claim 45, wherein said boundary walls are inclinedly extended from said base wall such that said top opening of said boundary frame is facing in an inclination manner when said ~~bracket~~ container frame is held on said golf cart.
